

BTFS2/2S TWO WORK STATIONS BALANCING MACHINE FOR FANS

This machine has been developed to balance the various types of fans in the automotive field, for the civil and industrial sector, etc. It has two work stations for increased production output. The entire balancing cycle is menu driven for easy operation, even for unskilled labour.

Technical data:

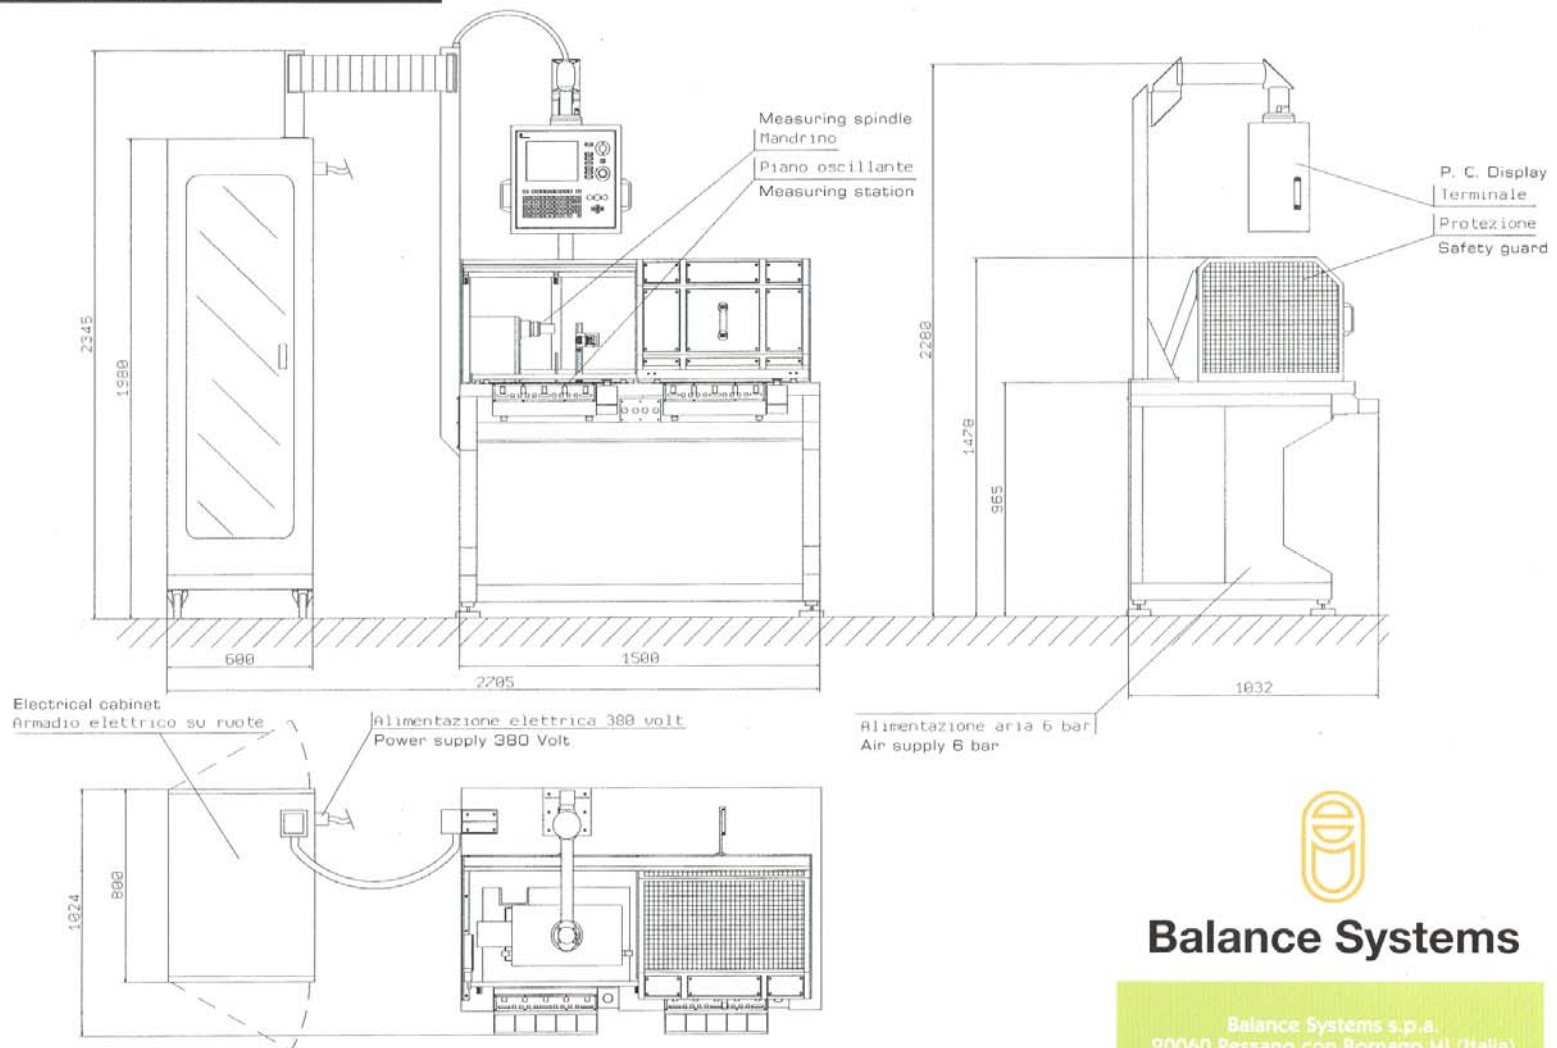

Fan diameter:	about 400 mm
Measuring time:	10 sec.
Achievable final unbalance:	4 grmm.
<i>It depends on the mechanical quality of the fan</i>	
Sensitivity:	0.1 grmm/Kg
